

### WEEK 3

Monday: we went to the main farm where the younger chicks were reared. I assisted with diagnosing of diseases. We removed some lighter ones from the cage because the chicks has grown more feather. Then I gave them feed and water.

Tuesday: The broilers was moved to a new cage so the former cage could be cleaned. I packed the wasted sun dust. I was able to distributed and managed feed, drugs and monitored them for a while.

Wednesday: I went to get some powdered blood tonic from the store after getting back to the main farm, I observed and noticed that there were some broiler chicks that were sick. I separated them immediately so the healthy ones won't be affected. I assisted in treating the sick ones.

Thursday: I checked the well being of the sick broiler immediately I got to the farm. I gave them some anti antibiotics and a lot of glucose in order to boost their energy. After few hours, I changed their water added some powdered blood tonic and gave them their feed.

Friday: The waste dump of the broilers was checked so we could know if they needed more/ some antibiotics or not. Some needed and they were given. Later in the day, the waste dump was being packed and were gave to the cat fish.

Saturday: I assisted with analyzing data on egg production which includes egg numbers, egg weights and egg quality.
